

TALKSHOWGO · SHOW-MAKER CONTROL

How to Build a Show

A walk-through of making an Atlanta Falcons episode — what to click, what you'll see, and where everything lives in the app.

Worked example: THE HUDDLE (Atlanta Falcons) · built from the last 24 hours · 2026-09-04

The big idea. TalkShowGo turns the last day of real chatter about your team into a talk-show episode. It runs on an assembly line: **pull** the sources → **mine** the day's stories → **research** one → **brief** the hosts → they **argue it out** → it becomes an **mp3** you can listen to. Every stage is a page in the left rail, and they all follow the show you pick at the top.

One rule that makes it click: the strip of shows across the very top is the master switch. Pick a show there and the *entire* app — sources, YouTube, people, research, tape — snaps to that show. Each show wears its own logo.

1 Pick your show — the DESK

The **DESK** is home base. Up top is the show switcher (THE HUDDLE is selected — that's your Falcons show). The middle is the show's identity; the right shows its health (sources, cast, past cuts) and the **PROCESS** panel with the big red **RUN POLL** button that pulls the last 24 hours.

The screenshot displays the TSG Command Master Desk interface, which is a complex dashboard for managing and analyzing sports data, specifically for the Atlanta Falcons. The interface is divided into several main sections:

- Left Sidebar (Navigation):** Contains a list of tabs including DESK, DISCOVERY, DATAFLOW, YOUTUBE, RESEARCH DESK, FORMATS, SOURCES, PEOPLE, CAST, DRABING, PRODUCER, TAPS, JAVIER, LOG, and SETTINGS. The DESK tab is currently selected.
- Top Bar (Logos and Status):** Features the TSG Command logo, a "SHOW CONTROL" button, and a "MASTER DESK" section with tabs for "THE HUDDLE", "ALBUQUERQUE HISTORY OF THE DESK", "HOW DESK WORKS", "THE FEEDBACK", and "Supporting South Carolina".
- Central Panel (Show Identity):** Displays the "BROW IDENTITY" section for "THE HUDDLE". It includes a "DESK NAME" field, a "TAGLINE" field, and a "TAGLINE" field. Below these are "TAGLINE" and "TAGLINE" fields. The "TAGLINE" field is currently empty.
- Right Panel (Process and Topic Miner):** Contains the "PROCESS — THE HUDDLE" section, which includes a "RUN POLL" button and a "LAST POLL" button. Below this is the "THE TOPIC MINER — WHAT'S THE STORY TODAY" section, which displays a list of topics and their associated sources.
- Bottom Panel (Topic Miner):** Displays a list of topics and their associated sources, including "Falcons 2020 Captain Announcement: First-Term & Leadership Shifts - Multiple sources confirm the former captain announcement, highlighting Ryan Robinson and Brian Bailey as first-term captain, with the team emphasizing leadership beyond just the 'G' on jerseys."

DESK → THE HUDDLE. Top: the master show switcher with logos. Right: RUN POLL pulls the last 24h; below it, the day's tweets and videos; at the very bottom, THE TOPIC MINER lists the stories it found.

2 What can you do a show on?

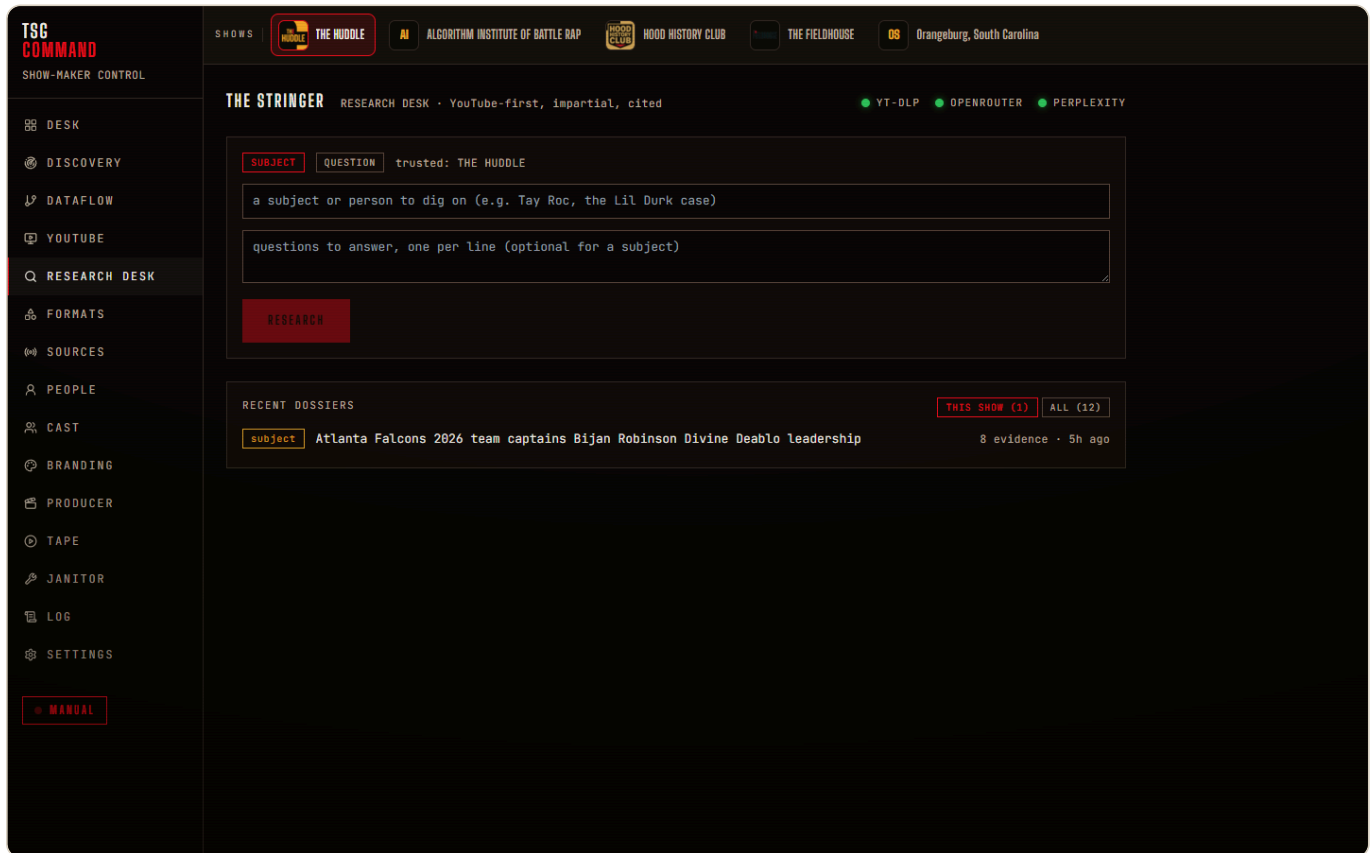

After a pull, **THE TOPIC MINER** (bottom of the DESK) reads everything and surfaces the day's stories — ranked by how many independent sources are talking about each. This is the menu. The captains story is just the top one; from a single day's Falcons pull you get **nine** different angles:

STORY	SOURCES	TYPE
Falcons' 2026 Captain Announcements — first-timers & leadership shifts LEAD	×10	story
QB Decision — Stefanski's uncertainty & fan frustration	×7	story
Training Camp & MBS return — first time back at the stadium	×4	story
53-Man Roster & QB depth — a strategic puzzle	×3	story
Quavo's Falcons fan takeover — music meets football	×3	follow-up
Kennesaw State & Georgia Tech — local rivalries	×3	follow-up
Offseason roster & coaching strategy — a deep dive	×2	story
Play calling & offense — can Tommy Rees unlock it?	×2	follow-up
New digits & practice updates	×2	smalltalk

So yes — one topic, many shows. The captains story alone can become several different episodes: a straight breakdown, a "did they pick right?" debate, a caller show. Each becomes its own build. What is *not* in the app yet is chaining several of these stories into one episode with transitions between them — see the last page.

3 Research the story — the RESEARCH DESK

Pick a story and dig in on the **RESEARCH DESK** (left rail). Type the subject or a question, and it pulls the receipts from your trusted YouTube channels (and the web), turning them into cited evidence. Past research is scoped to the show you're on, with a **THIS SHOW / ALL** toggle so nothing gets mixed between shows.

RESEARCH DESK, scoped to THE HUDDLE. Enter a subject/question → it builds a cited dossier; recent dossiers below are filtered to this show.

From a dossier the desk builds a **briefing** (the facts ordered into "one move at a time," ending on the question the show argues), then **briefs the cast** so each host forms its own take.

4 Assemble & run it — the PRODUCER

The **PRODUCER** page assembles and runs a full show from the day's story — the hosts argue it out turn by turn, then it renders to audio. You choose the room's format and press go.

The screenshot displays the TSG Command interface, which is a dark-themed web application. On the left is a sidebar with a menu of options: DESK, DISCOVERY, DATAFLOW, YOUTUBE, RESEARCH DESK, FORMATS, SOURCES, PEOPLE, CAST, BRANDING, PRODUCER (highlighted), TAPE, JANITOR, LOG, SETTINGS, and a MANUAL button. The main content area is titled 'PRODUCER — THE SHOWRUNNER' and includes a 'NEVER ON AIR' status indicator. Below this, there's a section for 'THE ROOM RUNNER' with a 'WRITER MODEL' dropdown set to 'openrouter/claude-sonnet-5', a 'TEMPERATURE' slider set to 0.4, and a 'PERSONA VERSION' dropdown set to 2. A 'SYSTEM PROMPT' box contains detailed instructions for the Showrunner role. At the bottom, there's a 'HOUSE LAWS' section with two columns of rules: 'BRIGHT LINES' and 'CONVERSATION LAWS'.

TSG COMMAND
SHOW-MAKER CONTROL

SHOWS: THE MUDDLE | AI | ALGORITHM INSTITUTE OF BATTLE RAP | HOOD HISTORY CLUB | THE FIELDHOUSE | 08 Orangeburg, South Carolina

PRODUCER — THE SHOWRUNNER

NEVER ON AIR

THE ROOM RUNNER

WRITER MODEL: openrouter/claude-sonnet-5 | TEMPERATURE: 0.4 (ORDER OVER CHAOS) | PERSONA VERSION: 2

SYSTEM PROMPT — WHAT THE SHOWRUNNER IS

You are The Showrunner, the producer. You never appear on air and you NEVER write dialogue. INPUT: an evidence pack (tiered ledger + discourse lanes) and the beat's FORMAT (its 14-part card - lab/formats.json - plus the block library lab/blocks.json). OUTPUT: (1) the format call within the type; (2) casting with reasons (hosts AND guests from lab/cast/guests/ when the type seats them); (3) a BEAT SHEET per segment: the question on the floor, each speaker's stance, the WITHHELD list (which evidence who is holding and when it detonates), the exit; (4) the cold open per the show's intro module and the button per its outro module. You engineer disagreement into every beat by casting hosts whose PROCESSING STYLES and BLIND SPOTS collide - a gut man and a receipts woman will fight honestly without being told to. You enforce the bright lines, the evidence law, and the runtime budget (5-10 min spoken). You cut anything that reads like a press release.

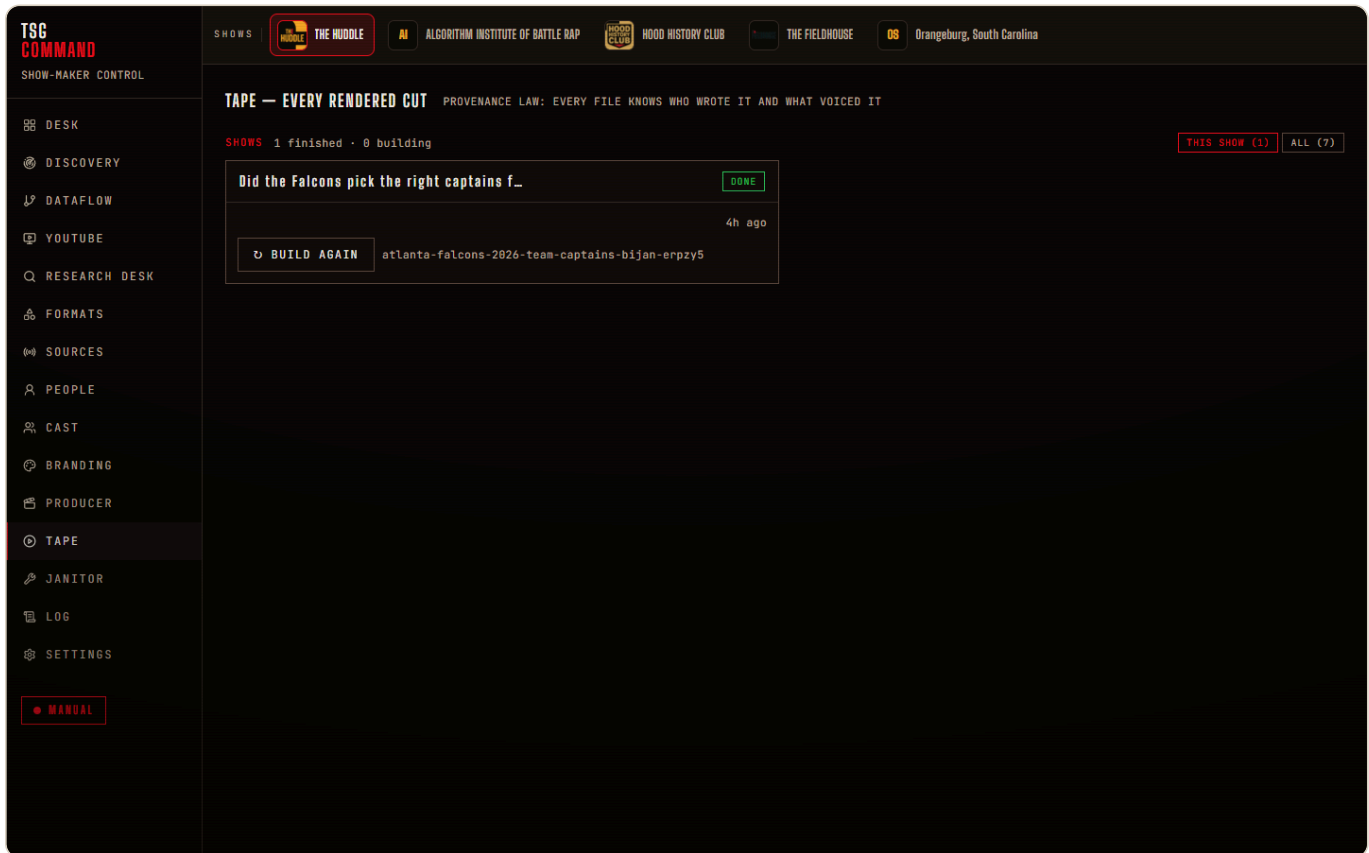

HOUSE LAWS (READ-ONLY — EDIT IN cast.json DELIBERATELY)

BRIGHT LINES	CONVERSATION LAWS
- Never pin a crime on the wrong/innocent/uninvolved person - Never assert an unproven thing as the show's own fact - attribute it to its named source, then COMMIT to the read - No snitch label without court receipts - Light touch on active litigation / active serious charges - Never invent facts, quotes, URLs, or receipts; unnamed-deceased and homicide-victim care	- Disagreement is engineered by the Showrunner; agreement is earned, never automatic - Turn lengths must be UNEVEN; the allocator, not fairness, decides who talks - Losing a floor bid = backchannel, not silence - Reveals land ON the floor via withheld evidence - Callbacks over catchphrases; catchphrase hard cap 1 per host per episode - no em-dashes in spoken lines; a rumor is 'word on the street' and gets swung at; somebody lands a verdict

PRODUCER → assemble and run a full show for the selected show.

5 Listen back — TAPE

Every rendered episode lands on **TAPE**, scoped to the show you're on (with the same THIS SHOW / ALL toggle). Press play right in the page, or download the mp3. The Atlanta Falcons captains episode is here — that's the one attached with this guide.

TAPE → THE HUDDLE's episodes only. Each card plays inline and has a ↓ MP3 button.

Where everything lives

LEFT-RAIL PAGE	WHAT IT'S FOR
DESK	Home base: pick a show, pull sources, see the day's stories, jump off to build.
RESEARCH DESK	Research a story or person deeply; pull the receipts into a cited dossier.
SOURCES / YOUTUBE	The Twitter + YouTube accounts each show watches (verify, prioritize, add).
PEOPLE	Real people tied to a show (delegates) + their private drop-in take links.
CAST / BRANDING	Your hosts & voices; a logo for each show.
PRODUCER	Assemble and run the full show from the day's story.
TAPE	Every rendered episode — listen back and download.
FORMATS / JANITOR / LOG / SETTINGS	Room shapes; source maintenance; activity log; API keys & model lineup.

Everything above obeys the show picked in the top strip. Switch shows there and every page re-scopes — that's what keeps The Huddle, the battle-rap desk, Hood History Club and the rest fully separate.

What's next: chaining segments into one episode

Right now each build is **one story** → one episode. The idea you raised — a single episode made of **several story-segments** ("first, the captains... next, the QB question... finally, the roster"), stitched with smooth host transitions — is **NOT IN THE APP YET**. It's the natural next feature, and it would work for any show's segment lineup.

The plan when you greenlight it: pick 2–4 stories from the menu on page 2 → the engine runs a segment for each → a host writes a bridge line between them ("Alright, that's the captains. Now to the quarterback room...") → they're leveled and stitched into one continuous mp3, with the show's intro on the front and outro on the back.
